Section IV.	SPECIAL TOOLS LIST (Not Applicable)		
V.	FEDERAL STOCK NUMBER AND REFERENCE NUMBER INDEX		

Section I.
INTRODUCTION

1. Scope

a. This manual lists repair parts, special tools, test and support equipment required for the performance of organizational maintenance of the landing craft.

b. Repair parts listed represent those authorized for use at the organizational level and will be requisitioned on an "as required" basis until stockage is justified by demand in accordance with AR 710-2.

2. General

This repair parts and special tools list is divided into the following sections:

a. Prescribed Load Allowance List - Section II. Not applicable.

b. Repair Parts List - Section III. A list of repair parts authorized at the organizational level for the performance of maintenance. The list also includes parts which must be removed for replacement of the authorized parts. Parts lists are composed of assembly groups in ascending numerical sequence, with the parts in each group listed in figure and item number sequence.

c. Special Tools List - Section IV. A list of special tools, test and support equipment authorized for the performance of maintenance at the organizational level. (Not applicable).

d. Federal Stock Number and Reference Number Index - Section V. A list, in ascending numerical sequence, of all Federal stock numbers appearing in the listings, followed by a list, in alpha-numeric sequence, of all reference numbers appearing in the listings. Federal stock number and reference numbers are cross-referenced to each illustration figure and/or item number.

3. Explanation of Columns

The following provides an explanation of columns found in the tabulated listings in Section III.

a. Source, Maintenance, and Recoverability Codes (SMR). The SMR code is a five letter code composed of three parts consisting of a two (2) position source code, a two (2) position maintenance code, and a one (1) position recoverability code. Support items listed in this RPSTL assigned maintenance and recoverability codes and no source code can be requisitioned, with justification, through normal supply channels by use of the manufacturers code and part number. Such support items are NOT normally stocked.

(1) *Source Code.* Indicates the manner of acquiring support items for maintenance, repair, or overhaul of end items. Source codes are entered in the *first* and *second* positions as follows:

Code	*Definition*
PA	Item procured and stocked for anticipated or known usage.
PB	Item procured and stocked for insurance purposes because essentiality dictates that a minimum quantity be available in the supply system.
PC	Item procured and stocked and which otherwise would be coded PA except that it is deteriora- in nature.
PD	Support item, excluding support equipment, procured for initial issue or outfitting and stocked only for subsequent or additional initial issue or outfittings. NOT subject to automatic replenishment.
PE	Support equipment procured and stocked for initial issue or outfittings to specified maintenance repair activities.
PF	Support equipment which will not be stocked but which will centrally procured on demand.
PG	Item procured and stocked to provide for sustained support for life of the equipment. It is applied to an item peculiar to the equipment which, because of probably discontinuance or shutdown of production facilities, would prove uneconomical to reproduce at a later date.
KD	An item of depot overhaul/repair kit and not purchased separately.
KF	An item of a maintenance kit and not purchased separately.
KB	Item included in both a depot overhaul/repair kit and a maintenance kit.
MO	Item to be manufactured or fabricated at organizational level.
MF	Item to be manufactured or fabricated at direct support maintenance level.
MH	Item to be manufactured or fabricated at general maintenance support level.
MD	Item to be manufactured or fabricated at depot maintenance level.
AO	Item to be assembled at organizational level.
AF	Item to be assembled at direct support maintenance level.

Code	Definition
AH	Item to be assembled at general support maintenance level.
AD	Item to be assembled at depot maintenance level.
XA	Item is NOT procured or stocked because the requirements for the item will result in replacement of the next higher assembly.
XB	Item NOT procured or stocked. If not available through salvage, requisition.
XC	Installation drawing, diagram, instruction sheet, or field service drawing that is identified by manufacturer's part number.
XD	A low mortality item that is not stocked. When required, items will be requested and provided through normal supply channels.

NOTE

Cannibalization or salvage may be used as a source of supply for any items coded above *except* those coded XA and support items restricted by AR 700-42.

(2) *Maintenance Codes.* The maintenance code entered in the *third* position indicates the lowest maintenance level authorized to remove, replace, and use the item. The maintenance code entered in the *fourth* position indicates whether the item is to be repaired and identifies the lowest maintenance level with the capability to perform complete repair (i.e., all authorized maintenance functions). When a maintenance code is not used in the *fourth* position, a dash (-) will be entered.

Code	Application/Explanation
O	Item is removed, replaced, used (third position), or complete repair (fourth position) at the organizational level.
F	Item is removed, replaced, used (third position), or complete repair (fourth position) at the direct support maintenance level.
H	Item is removed, replaced, used (third position) or complete repair (fourth position) at the general support maintenance level.
D	Item is removed, replaced, used (third position) or complete repair (fourth position) at the depot maintenance level.
L	Repair restricted to designated specialized repair activity (fourth position).
Z	Non-repairable. No repairs authorized (fourth position).
B	No repair is authorized. The item may be reconditioned by adjusting, lubricating, etc., at the *user* level. No parts or special tools are procured for maintenance of this item (fourth position).

(3) *Recoverability Code.* The recoverability code entered in the *fifth* position indicates the disposition action on unserviceable items.

Code	Definition
Z	Non-repairable item. When unserviceable, condemn and dispose at the level indicated in position three (3).
C	Repairable item. When uneconomically repairable, condemn and dispose at organizational level.
F	Repairable item. When uneconomically repairable, condemn and dispose at direct support level.
H	Repairable item. When uneconomically repairable, condemn and dispose at general support level.
D	Repairable item. When beyond lower level repair capability, return to depot. Condemnation and disposal not authorized below depot level.
L	Repairable item. Repair, condemnation, and disposal not authorized below depot/specialized repair activity level.
A	Item requires special handling or condemnation procedures because of specific reasons (i.e., precious metal content, high dollar value, critical material, or hazardous material).

b. Federal Stock Number. Indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

c. Description. Indicates the Federal item name and a minimum description required to identify the item. The last line indicates the reference number followed by the applicable Federal Supply Code for Manufacturer (FSCM) in parenthesis. The FSCM is used as an element in item identification to designate manufacturer or distributor or Government agency, etc., and is identified in SB 708-42. Items that are included in kits and sets are listed below the name of the kit or set with quantity of each item in the kit or set indicated in front of the item name.

d. Unit of Measure (U/M). Indicates the standard or basic quantity by which the listed item is used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation, e.g., ea, in, pr, etc., and is the basis used to indicate quantities and allowances in subsequent columns.

e. Quantity Incorporated in Unit. Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared for an assembly group, or an assembly. A "V" appearing in this column in lieu of a quantity indicates that no specific quantity is applicable, e.g., shims, spacers, etc.

f. 15-Day Organizational Maintenance Allowances.

(1) Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

(2) The allowance columns are divided into four subcolumns. Indicated in each subcolumn is the total quantity of special tools authorized for the number of equipments supported. (Not applicable).

g. Illustration. This column is divided as follows:

(1) *Figure number.* Indicates the figure number of the illustration in which the item is shown.

(2) *Item number.* Indicates the callout number used to reference the item on the illustration.

4. Special Information

a. Usable on codes are included in Column 3. Uncoded items are applicable to all models and/or serial number range. Identification of the usable on codes used in this publication are:

Code	Used On
A	Marinette Marine Corp LCM 8500 Thru LCM 8519
B	Gunderson Bros Engineering Corp LCM 8520 thru 8539
C	Rohr Corp LCM 8540 thru 8619

b. The basis of issue for authorized special tools, test and support equipment is the number of end items of equipment supported and the number of maintenance personnel allocated to perform the required maintenance operations.

c. Parts which require manufacture or assembly at a level higher than that authorized for installation will indicate in the source column the higher level.

d. Repair parts kits and gasket sets appear as the last entries in the repair parts listing for the group or assembly to which they apply.

e. Action change codes indicated in the left hand margin of the listing page denote the following:

N - Indicates an added item.
C - Indicates a change in data.
R - Indicates a change in FSN only.

f. The following publications pertain to the landing craft and its components.

TM 55-1905-217-12 Operator and Organizational Maintenance Manual

g. The illustrations in this manual are identical to the applicable illustrations published in the -34P, Direct and General Support Maintenance Repair Parts and Special Tools List manual (including Depot maintenance repair parts and special tools, and the figure numbers are the same as appear in that manual. The -34P illustrations are given for a better understanding of the parts relationship, however, only those parts assigned maintenance code "O" are listed in the tabular list. Only illustrations containing organizational authorized items appear in this manual.

5. How to Locate Repair Parts

a. When Federal Stock Number or Reference Number is unknown:

(1) Using the table of contents determine the assembly group within which the repair part belongs. This is necessary since illustrations are prepared for assembly groups, and listings are divided into the same groups.

(2) Find the illustration covering the assembly group to which the repair part belongs.

(3) Identify the repair part on the illustration and note the illustration figure and item number of the repair part.

(4) Using the repair parts listing, find the assembly group to which the repair part belongs and locate the illustration figure and item number noted on the illustration.

b. When the Federal Stock Number or Reference Number is known:

(1) Using the Index of Federal Stock Number and Reference Numbers find the pertinent Federal Stock Number or reference number. This index is in ascending FSN sequence followed by a list of reference numbers in ascending alpha-numeric sequence, cross-referenced to the illustration figure number and item number.

(2) Using the Repair Parts Listing, find the assembly group of the repair part and the illustration figure number and item number referenced in the index of Federal Stock Numbers and Reference Numbers.

6. Abbreviations

amp . . . . . ampere(s)
cont . . . . . continuous
deg . . . . . degree(s)
ea . . . . . each
ft . . . . . foot (feet)
hex . . . . . hexagon
id . . . . . inside diameter
in . . . . . inch(es)
lb . . . . . pound
lg . . . . . length (long)
lh . . . . . left hand
mtg . . . . . mounting(s)
No. . . . . number
od . . . . . outside diameter
rh . . . . . right hand
sh . . . . . sheet
sq . . . . . square
thd . . . . . thread(s)(ed)
v . . . . . volt(s)
yd . . . . . yard

7. Recommendations for Maintenance Publications Improvements

You can improve this manual by calling attention to errors and by recommending improvements, using DA Form 2028 (Recommended Changes to Publications) or by letter, and mailing direct to Commander, U. S. Army Troop Support Command, ATTN: AMSTS-MPP, St. Louis, Missouri 63120. A reply will be furnished directly to you.
